1st Call Project Implementation ELDOWAS and NZOWASCO (Quality of Works Concerns)

- Poor Quality Sand
- Backfilling Substructure with Soil instead of Murram
- Short kicker bars being used on columns as a result they are not properly anchored and weak
- Poor quality concreting notice spalling of the columns, also note that the dimensions and alignment are not right
- Coarse and fine aggregate size mix being used is not right.
- Finished Slab result of poor workmanship
